Отчёт о взятии производной

(После взятия производная была положена обратно)

Рачков Михаил Васильевич, Б01-201

$$f(x) = x^{x} \cdot \frac{\sin x - \cosh x^{A}}{B} \tag{1}$$

Где:

$$A = \frac{\tan x}{\sinh x^2} \tag{2}$$

$$B = \sin(x^4) + x^5 \tag{3}$$

Упростим по возможности:

$$f(x) = x^{x} \cdot \frac{\sin x - \cosh x^{A}}{B} \tag{4}$$

Где:

$$A = \frac{\tan x}{\sinh x^2} \tag{5}$$

$$B = \sin(x^4) + x^5 \tag{6}$$

Возьмём производную:

$$f'(x) = x^x \cdot A \cdot \frac{\sin x - \cosh x^B}{C} + \frac{D}{N^2} \cdot x^x \tag{7}$$

Где:

$$A = \left(1 \cdot \ln x + \frac{1}{x} \cdot x\right) \tag{8}$$

$$B = \frac{\tan x}{\sinh x^2} \tag{9}$$

$$C = \sin(x^4) + x^5 (10)$$

$$D = E \cdot F \cdot H \cdot I - (J + L \cdot 1) \cdot \sin x - \cosh x^{M}$$
(11)

$$E = \frac{\tan x}{\sinh x^2} \tag{12}$$

$$F = \sin x - \cosh x^{G-1} \tag{13}$$

$$G = \frac{\tan x}{\sinh x^2} \tag{14}$$

$$H = (\cos x \cdot 1 - \sinh x \cdot 1) \tag{15}$$

$$I = (\sin(x^4) + x^5) \tag{16}$$

$$J = \cos(x^4) \cdot K \cdot 1 \tag{17}$$

$$K = 4 \cdot x^{4-1} \tag{18}$$

$$L = 5 \cdot x^{5-1} \tag{19}$$

$$M = \frac{\tan x}{\sinh x^2} \tag{20}$$

$$N = \sin(x^4) + x^5 (21)$$

Упростим по возможности:

$$f'(x) = x^x \cdot A \cdot \frac{\sin x - \cosh x^B}{C} + \frac{D}{L^2} \cdot x^x \tag{22}$$

Где:

$$A = \left(\ln x + \frac{1}{x} \cdot x\right) \tag{23}$$

$$B = \frac{\tan x}{\sinh x^2} \tag{24}$$

$$C = \sin(x^4) + x^5 (25)$$

$$D = E \cdot I - (J + 5 \cdot x^4) \cdot \sin x - \cosh x^K$$
 (26)

$$E = F \cdot G \cdot (\cos x - \sinh x) \tag{27}$$

$$F = \frac{\tan x}{\sinh x^2} \tag{28}$$

$$G = \sin x - \cosh x^{H-1} \tag{29}$$

$$H = \frac{\tan x}{\sinh x^2} \tag{30}$$

$$I = (\sin(x^4) + x^5) \tag{31}$$

$$J = \cos(x^4) \cdot 4 \cdot x^3 \tag{32}$$

$$K = \frac{\tan x}{\sinh x^2} \tag{33}$$

$$L = \sin(x^4) + x^5 \tag{34}$$
